**INFORMATION ON GROWING
DWARF "BONSAI" TREES
JAPANESE METHOD**

**Don Pedro Farms, Rte. 2 Box 1007
Stockton, California**

Growing trees from seed is the most economical way of obtaining trees and shrubs for yard and patio. Plant seeds of your choice in a corner of your yard. A hundred trees may be started in a very small space (3 feet by 3 feet). Yes, you can even grow in your house or garage. Transplant to pots or location desired in landscaping plan, the same or following year, depending on height wanted. You will be pleased with the savings made in landscaping costs. Without a doubt, you will have more trees than you can use. These may be given away, traded or sold.

"BONSAI," the art of growing trees in bowls, can be an enjoyable hobby or profitable home business. For centuries, the growing of these tiny trees was considered an Oriental secret. For beginners desiring to learn this fascinating culture, we offer the following:

30-page illustrated booklet **"Raising Dwarf 'Bonsai' Trees for Pleasure and Profit."** This concise booklet gives the instructions on growing these trees, only inches high. Besides the history of this Oriental art, you are given information on locating aged dwarf trees, probably centuries old and dwarfed by nature. Some of these trees have been valued at thousands of dollars. You are also informed on how to start a home business that could be developed into a full time business. As a matter of fact, DON PEDRO FARMS originated in this very manner. Gilbert S. Cruz, owner and grower of Don Pedro Farms is the author of the above mentioned booklet.
